

# Long Implants

Implant options up to 25mm in length

Adin's long implant range serves as an extension to the current Touareg™-OS and Touareg CloseFit™ WP platform implants, allowing implant placement options up to 25mm in length.

In cases where more bone-to-implant contact is required, Long implants may serve as a solution where the space allows for longer implants, alternatively, long implants can be used effectively as bi-cortical anchorage to compensate for lack of bone while still achieving implant stability in cases where implants of regular length might not.

Adin's long implant range carry specific features designed to enhance their performance such as narrow apex for limited spaces and a smooth neck to better suite gingival engagement.

Adin's unique and reliable Osseofix™ surface treatment is utilized for both current Touareg™-OS and CloseFit™ WP platform long implants Compatible drill set and depth probe have been designed to maximize ease of use and safety.
